

Fabrics

Sunscreens

Sunscreen fabrics are performance or technical fabrics which give ultimate control over natural light. Our broad range of sunscreens make them appropriate for any application. Whether your goal is reducing solar heat gain, protecting interiors against damaging UV rays, or improving the comfort of any interior space through glare control or temperature control – sunscreens are the solution.

Sunscreens allow various degrees of outward visibility through different weaves and openesses. Sunscreens are available in 1%, 3%, and 5% openness meaning that they block 99%, 97%, and 95% respectively of the sun's rays from entering the interior, while allowing outward views.

Blackout

Our extensive selection of blackout or opaque fabrics block out the sun to provide room darkening. Blackout shades are appropriate in bedrooms to support better sleep, in media or theatre rooms, or anywhere else where room darkness is important. Add side and bottom channels to further block out sunlight and ensure complete room darkening.

Decorative

TRANSPARENT

Available in a variety of textures and styles – all which allow full outward visibility and a softened glow of natural light. Ideal for northern exposure windows and accompanying drapery.

TRANSLUCENT

From a subtle sheen to pronounced textures, translucent fabrics provide privacy and warmth with diffused sunlight. In the evening with the lights on, only silhouettes can be seen from the outside.

PRIVACY

There will be a slight amount of light visible, but no outward or inward visibility. Privacy shades are perfect for a bedroom, bathroom, or where your windows face the street or the neighbours.

Dual Shades

Designed to combine two fabrics in one system, each shade is controlled independently for precise control of light and privacy. Dual shades are ideal for situations where light control for glare prevention or outward visibility are desired during the day, while room darkening and privacy are needed at night.

Fabric Specifications: Banded and Sheer

Banded
